### **DETAILED ACTION**

The following is a first action on the merits of application serial no. 10/731,051 filed on December 9, 2003.

### **Priority**

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

## Information Disclosure Statement

The information disclosure statements filed on March 10 and March 22, 2004 have been acknowledged.

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 12-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over WO 98/51943 in view of Hirabayashi ('925). The WO reference discloses a planetary transmission having one sun gear (2) actuatable by an input shaft (20), one ring gear (12) connected with a housing, one group of planetary gears (8, 10) and one group of step planets with a large (4) and small (6) step gear, the planetary and step gears are supported by a common carrier (24) and engaged with each other (8 engaged with 6, Figures 7 and 8) same as with the sun gear and ring gear, the carrier having an output flange (not referenced, but carrier is output gear, column 7, line 60) supported opposite

Application/Control Number: 10/731,051

Art Unit: 3681

to the housing through a cross roller bearing (34) and designed in at least two parts

(Figure 4 discloses reference character 24 indicating two different sides of the carrier)

wherein the right part is the carrier via shafts supporting gears 6 or 8 and the left part is
the output, but the roller bearing doesn't have split inner rings supporting the roller.

Hirabayashi discloses a planetary gear transmission having one sun gear (103) actuatable by an input shaft (102), one ring gear (105) connected with a housing, and one group of planetary gears (104), the planetary gears are supported by a carrier having an output flange (protruding from 107) supported opposite the housing through a cross roller bearing (117) and designed in at least two parts (107, 108) wherein the seats (119) of both parts form the inner split rings for axially fixing the roller bearing, a partition line between the split of the carrier is axially aligned with the split for fixing the roller bearing, the parts are braced together through bolts (115) and centered via a sleeve (not referenced, encompassed by 108 faced against bearings encompassed by 107).

It would have been obvious to a person of ordinary skill in the art at the time the invention was made to provide the cross roller bearing of the WO reference with a split ring support in view of Hirabayashi to eliminate looseness in the thrust loading direction.

#### **FACSIMILE TRANSMISSION**

Submission of your response by facsimile transmission is encouraged. Group 3600's facsimile number is **(703)** 872-9326 before final and 703-872-9327 after final. Recognizing the fact that reducing cycle time in the processing and examination of patent applications will effectively increase a patent's term, it is to your benefit to submit responses by facsimile transmission whenever permissible. Such submission will place the response directly in our examining group's hands and will eliminate Post Office processing and delivery time as well as the PTO's mail room processing and delivery time. For a complete list of correspondence not permitted by facsimile transmission,

Application/Control Number: 10/731,051 Page 4

Art Unit: 3681

see MPEP 502.01. In general, most responses and/or amendments not requiring a fee, as well as those requiring a fee but charging such fee to a deposit account, can be submitted by facsimile transmission. Responses requiring a fee which applicant is paying by check **should not be** submitting by facsimile transmission separately from the check.

Responses submitted by facsimile transmission should include a Certificate of Transmission (MPEP 512). The following is an example of the format the certification might take:

I hereby certify that this correspondence is being facsimile transmitted to the Patent and Trademark Office (Fax No. (703) 000-0000) on	(D4+)
Typed or printed name of person signing this certificate:	(Date)
(Signature)	

If your response is submitted by facsimile transmission, you are hereby reminded that the original should be retained as evidence of authenticity (37 CFR 1.4 and MPEP 502.02). Please do not separately mail the original or another copy unless required by the Patent and Trademark Office. Submission of the original response or a follow-up copy of the response after your response has been transmitted by facsimile will only cause further unnecessary delays in the processing of your application; duplicate responses where fees are charged to a deposit account may result in those fees being charged twice.

### Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

-Hashimoto et al ('430), Bayer ('261) and ('995), Shirasawa ('608) and JP 06307505A.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to TISHA D. LEWIS whose telephone number is 703-305-0921. The examiner can normally be reached on M-Thur 8 AM TO 3 PM.

Application/Control Number: 10/731,051

Art Unit: 3681

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, CHARLES A. MARMOR can be reached on 703-308-0830. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
